

Project / Task - 3

MATRICES / NUMPY -----

- Matrix is the tabular representation of the data
- Lot of datas are stored in table format,that is why Matrices is very very important topic in python
- as we working on dataframe so matrices are played a major rule
- List is one dimension & matrix is multidimension
- indexation is very important to plot the datapoints
- we will see tht & we gonna analyze the NBA players
- hear i have taken top 10 highest paid player in 2015-2016 season
- we will analyze how 10 players have been playing over the past 10 years & we had the data for past 10yrs yrs
- our main goal is to find trends,patterns & their performance for the past 10 yrs
- ultimately they haven't always been top 10 player & lets see how they improving, what actually secretes or patterns
- dont worry guys if you dont know anything about basket ball NBA
- I will explain indepth of everything
- lets analyze the statistics of the basket ball player
- gp - total games played,mpg - minutes per game,field goal(accuracy), ppg (points per game) -- this is no of point player has scores in that season
- guys slowly i am bringing you into data analytics, jump into datavisualization using python
- i will give you the this code can everybody copy and paste your jupyter notebook
- Now i will explain with matrices

```
